REDCLIFF REVIEW

OUR SLOGAN: An Industrial Metropolis of Industrious People Who Pull Together.

Volume 21 THE REDCLIFF REVIEW THURSDAY JUNE 9th, 1932 Number 34

Better Slow and Sure Than Be Sorry Later

Are Picking Now For Hasty Action of The Past

In its issue last Saturday the Medicine Hat "ews" says: "At the recent session of the House of Commons, an opportunity was afforded Premier Bennett to make a place for himself among the names of Prime Ministers of Canada who have done something really worth while for the Dominion. The "opportunity" which Mr. Bennett missed was, in the opinion of the News, not rushing through legislation in connection with the "back-to-the-land" movement, at the last session of parliament, so that the unemployed in the urban centres could now be on the land and have a crop ready to harvest this fall.

The News omits to point out, however, that much of the delay in getting unemployment and the farm relief measures through the house expeditiously was caused by one of those past Premiers whom the News, no doubt, thinks has done something, Mr. King and his supporters hold up this business for days quibbling over minor technical matters that didn't amount to a row of beans.

Concluding the conditions which Canada has experienced as a result of hasty, ill-considered actions of governments in the past, one would think that a little forethought and planning before 1913 now, would be quite in order.

True, the unemployment situation is a serious one at the present time, but hasty, temporary relief is not solving the problem, but instead may only add to our troubles later on, just as hasty action has in the past. There is nothing which requires more careful study and planning than this same back to the land move.

Past experience with Soldiers' schemes, land grants, scrip, etc. have shown many mistakes and failures which resulted in considerable expense to the country and discouragement and disappointment to the individual. To make the land movement a success now and make it lasting, both to men and the land must be hand-picked and proper provision made for financial help and supervision. These preliminaries take time.

We do today paying dearly for hasty ill-considered policies of the past. Take for instance the immigration policy of the Liberal party shortly after assuming power in 1896. The British Columbia falls are full of the nude Indians who were brought to this country by a policy of giving them land for two cents. But why go on? It is to get his name associated with the past premiers who were responsible for these hasty and expensive actions that the News would have Premier Ben-

Sudden Death of Mrs. James Hargrave

Deceased Came to Medicine Hat Fifty Years Ago.

Mrs. James Hargrave, pioneer of Medicine Hat, passed away suddenly last Sunday afternoon from severe heart attack. She was 79 years of age.

Deceased was well known throughout this district as she came here with her husband in 1882 and has resided in Medicine Hat ever since.

The late Mrs. Hargrave was the mother of R. C. Hargrave, manager of the Pioneer Brick plant here, and Mrs. H. J. Sisson, formerly of Redcliff. Besides these and her husband deceased leaves three other sons and three other daughters. These are: Dr. J. C. Hargrave, P. A. Hargrave, Mrs. James Mitchell and Mrs. Thomas Murray, of Medicine Hat; W. H. Hargrave, Edmonton and Mrs. Dr. Hawke, Invermere, B. C.

The funeral took place from St. John's Church yesterday afternoon and was largely attended.

Later developments have shown that Dick Phillips, who went with an accident in the Pressed Brick Shale Mine last Thursday, was more seriously hurt than was at first thought. It has been discovered that the accident caused an impacted fracture of his spinal column and that it will be necessary to keep Mr. Phillips in a plaster cast for several months to allow the fracture to heal. His other injuries were not serious. Mr. Smith who was also hurt in the same accident is progressing favorably.

net aspire? Surely we have had enough experience with hasty, ill-considered schemes to warrant our governments in taking a little careful thinking and planning before starting to dish out any more half baked buns.

Churches

GORDON MEMORIAL (UNITED) CHURCH

Pastor: Rev. B. Enslin Pw Sunday, June 12th 1932.

10 a.m. Church School.

11:15 a.m. Morning Worship Subject: "The Indwelling Word"

3 p.m. Bowell.

7:30 p.m. Evening Worship. Subject: "The Fire That Does Not Consume"

"There is more love here than hate more hope than fear, in the mixed murmur of the human heart."

ST. MARY'S CHURCH

Celebration of Mass every Sunday of each month except first Sunday, at 8:30 a.m.

ST. AMBROSE'S CHURCH

Rev. Malcolm Gowat, Vicar. 8 a.m. Holy Communion.

10 a.m. Sunday School.

1st and 3rd Sundays 11 a.m. Choral Festival. 2nd, 4th and 6th Sundays 11 a.m. Matins and Sermon. 7:30 p.m. Evensong and Sermon.

Annual Recital Here Friday Night

Will Be Put on by Paul Knapper and Merrill Woodruff

Paul Knapper, violinist, and Merrill Woodruff, pianist, with of whom have a large class of pupils, are putting on a recital in Gordon Memorial Church on Friday evening of this week, commencing at 8 o'clock.

Judging from reports of the excellent program these talented artists put on in Medicine Hat recently, a rare treat is in store for music lovers of this town, on that occasion.

Besides their pupils, both Mr. Knapper and Mr. Woodruff will take part in the program and they will be assisted by Mr. George Gough, a talented clarinetist. Admission: Adults 25c student 15c.

Here and There

Antiquaries are that there is an attendance of 500 Indians at the starting of the regatta at the Cornwallis Hotel, Redcliff, June 1 and 2. It is held that Sir John Bennett, of St. John's, Newfoundland, will address the convention.

Hon. Gordon S. Harrington, Minister of the Interior, visited here recently for Montreal where he was to deliver a speech at the annual meeting of the Old Countrymen's Association. During his absence, Hon. Percy C. Black will be acting premier of the province.

"It is not too much to say that any improvement in the revenue of the railroads will immediately make itself felt in all channels of trade and that the maintenance of railroad service is more than any other domestic factor to the strength of our nation's institutions," says an editorial in the Canadian Press.

The "large open to water" in railway affairs was well illustrated in the case of Charles H. Beving, a railroad for consecutive years, recently promoted president of the Baiting Company. In 1893, at the age of 17, Beving began his career as a railway trainman in the employ of the Philadelphia & Reading Railway, now the Reading Company.

There were 447 moose and 5994 deer shot in New Brunswick last year, according to figures contained in the annual report of the Game and Fish Department of the province. There was also a very successful caribou season with a bag of 44400 birds.

Warner warmer and generally favorable conditions point to normal development of the western wheat crop, according to the report of the agricultural department of the Canadian Department of the Interior. Virtually all of Manitoba's seed is in and Saskatchewan and Alberta seed will be completed by the end of the third week of May.

Two famous globe-trotters, Dr. Roy Chapman Andrews, noted naturalist, and Bob Davis, a railroad for consecutive years, recently promoted president of the Baiting Company. In 1893, at the age of 17, Beving began his career as a railway trainman in the employ of the Philadelphia & Reading Railway, now the Reading Company.

Success attending the inaugural cruise of S.S. Princess Alice last year to Southern British Columbia and Alaska led to British Columbia Coast Steaming service to Alaska and other specific Alaska cruises with the S.S. Princess Charlotte, under Captain H. H. Vancouver, it is announced by R. T. Borden, general manager of the Canadian Pacific Railway.

Capital, labor, the learned profession, diplomacy and business were all represented by the passenger list of the Canadian Pacific to the Empire of Canada's arrival at Quebec recently. The list included Sir Charles Stewart, president of the Bank of Montreal; Tom Moore, president of the Trades and Labor Congress of Canada; F. H. Meredith, K.C., Dr. Meade, central general for Canadian Stagnation; and Colonel Hercules Smith, Canadian Government Trade Commissioner in Paris.

Residents of Maritime Provinces will have a fine opportunity of visiting the Montreal's great Navy. The ship is a special low rate Canadian Pacific coast excursion line. The ship, the President, is on the same week-end and will be operated by the railway from Montreal and the shipyard, Ontario, across.

Red Caps Lose Game By Costly Errors

Medetals Take Long End 7-2 Score in League Game

Southern football continues to furnish considerable excitement and amusement for fans in town and during the past week good crowds attended the games.

In a league game last Friday evening the Red Caps lost to the Medetals and on Sunday a friendly game was played between two teams picked from town. This game ended in a tie.

With the exception of the first innings when the Medetals scored five runs, the league game last Friday evening was a real snappy one from the spectators' point of view. The game, however, was considerably spoiled by a series of costly errors on the part of the Red Caps in this half of the first, giving the visitors a substantial lead which they maintained to the finish. After this the Red Caps tightened up and for the balance of the game only two runs were registered by each team, leaving the score at the finish 7-2 for the Medetals.

While getting the bucking horses ready to Redcliff Stampede, Ole Oleson had his nose bled trying to get one of the wild ones into the squeeze. Ole says he will be all right for the first, however.

Mr. Robt. Thomson, formerly of Redcliff and Bowell but now of Brooks, is at present in the Medicine Hat hospital undergoing treatment for a rupture. He is now reported much improved and progressing nicely.

Theodore Van Wort who recently rented from the town the building on Broadway previously occupied by J. Hinson, is having the building completely renovated and fitted up for a store which he expects to open shortly.

Miss Orpha Beiler was taken to the hospital last weekend and after examination it was found an operation was necessary as she was suffering from internal complications. Although the operation was a success Miss Beiler was in a serious condition for several days. However she is now much improved and is progressing favorably.

The periodical rains during the past few weeks have considerably lessened the possible damage to crops from cutworms and grass hoppers. Although slight damage was done by the cutworm it was not serious and the grass hoppers menace appears to have passed up this district. So far crops are in excellent condition around here.

J. M. Farland manager of the Canadian Wheat Pool, says there is absolutely no truth in the report that Pool wheat was being liquidated. He also says the world wheat situation has greatly improved in the last few months and that prices should readily respond to an improvement in world financial conditions.

Another Draw For Diamonds and Legion

No Score Game In Five Roses Competition

The Diamond D's and the Legion the two old rivals in the local football league met again Tuesday evening in the Five Roses fixture, and for the fourth time this season that the two teams have met, the game ended in a draw, neither side having scored a goal. It was a case of diamond cut diamond all the way through and although both teams lost golden opportunities to score there was always a very good reason why they failed to do so. Sometimes it was because the forwards lacked the punch at the critical moment; sometimes because of nursing the ball too long and sometimes because of the excellent work of the defence on both sides.

The result of the game is a fair indication of the play and comparative strength of the two teams. The Diamond D's had a slight edge in the first half of the game, especially at the start but in the second they appeared to have grown weary of well doing, while the Legion lived up to a bit.

With the exception of the disappointments when the players failed to take advantage of their opportunities, the game was a good one to watch as the several close calls on both sides furnished enough exciting moments to keep the fans on their toes.

The Diamonds meet the Brick & Coal here tonight in the Five Roses. The Callie and the Legion meet in the same fixture tomorrow night.

Land Settlement Plan Discussed at Edmonton

Selected Families Expected to be Advanced \$ 600

Premier Brunwell and the Mayors of Alberta cities met in Edmonton this week to discuss the proposed land settlement scheme whereby specially selected families from the unemployed would be placed on farms.

The scheme, which would be a three-way affair as suggested by the Dominion, would be that a maximum of \$600 could be advanced to any family, of which \$100 would be held back the first year to take care of sustenance the second. None of the money to be advanced would be valuable for rent or purchase and the maximum contribution by the Dominion would be \$200.

RED CROSS DRIVE HERE SATURDAY & MONDAY

Citizens are reminded of the local Red Cross drive which will be put on here next Saturday and Monday.

Canvassers have been appointed for different sections of the town and a thorough canvass will be made. Be prepared for them when they call. The local organization has done some good work and is deserving of your support.

A. N. Collard is in Calgary this week attending the Masonic Grand Lodge as representative from Redcliff.

Auxiliary Conference Held in St. Ambrose

Good Attendance Present From Medicine Hat Deansery

The annual conference of the Women's Auxiliary of the Medicine Hat Deansery was held in St. Ambrose Church on Thursday last. Holy communion was celebrated at 10 a.m. by Canon Western, K. D., assisted by Rev. P. M. Stewart. There were between 10 and 60 members present at the Holy Sacrament. Rev. T. W. Sweeting, being the preacher, gave an interesting sermon, taking a his "text" the words: "The Master is coming; he calleth for thee."

Following this service luncheon was served in the parish hall and immediately after the registration of the delegates took place.

At 2 p.m. the business session opened. The minutes of the last annual meeting were read by Mrs. McQueen in the absence of the secretary who is ill. A hearty welcome was extended to all the members by Mrs. Ellis. Mrs. Kelly, of Holy Trinity, Medicine Hat, responded on behalf of the visitors.

The president, Mrs. Hoson, gave an inspiring address. One of the things she particularly spoke of was the Thank-offering. She said it was a blessing to give for anything for which we are thankful.

After the presidents address the report of each branch was read and found interesting, but the feature of the afternoon was an interesting address by Mrs. Dewdney, of Tompkins. She spoke of her work and experience in the far north on an Indian reserve.

The election of officers followed. Deansery Pres.—Mrs. Allan, Medicine Hat. Vice Pres.—Mrs. Stewart, Redcliff. Sec.—Treas.—Mrs. Robertson, Medicine Hat.

A visit thanks was given by the secretary of St. Ambrose, Medicine Hat, and the session close with evensong in St. Ambrose church at 8:15, followed by supper in the parish hall. Thus ended a happy day.

Percy Rand, of Summerland, B.C., who has been visiting Mr. and Mrs. D. McLellan for the past month, returned home Monday.

Mr. Geo. Kerr, postmaster at Bowell, has purchased from Mr. John Ellis the building and lots on the east end of Main street, B.Well.

S.E. Gust was in town yesterday superintending the erection of a new sign over his store. The sign bears the name "Penny Profit Store". This is the name by which the Gust store will be known in future.

The Saskatchewan river missed over 14 feet last Friday and Saturday, receded considerably over Sunday. No serious damage has been reported around here but a family in Medicine Hat was marooned over night on Strathcona island. They had gone to the island to fish and while there the flood came suddenly and prevented them from returning to the mainland. They were rescued by city police the next morning.

Anglo-American Good Will On Firmer Footing Now Than Ever Before, Says U. S. Paper

There is reason for believing that Anglo-American good will has got its roots struck more firmly into the soil of mutual respect and dignity than in earlier periods—even those when the plant seemed to be flowering most effluently. Too frequently in the past one has detected a slight waxiness, a touch of artificiality, about its most brilliant petals. Before the World War the work of our own horticulturists was often tinged with a sense of inferiority and with the envy and irritation that go with it; while that of the British was not wholly free from a certain condescension. Amid the dazzling prosperity of the post-war years those roles were, perhaps, reversed. British statesmanship continued to find in itself upon Anglo-American understanding, but the British people could not quite forgive us for such a spectacular success in our own way.

Both moods have collapsed amid the sterner realities of the depression. A common adversity has given each people a better appreciation of the real qualities and greatness of the other than either enjoyed five or twenty-five years ago. The two nations regard each other with less animosity than they have sometimes felt, but with much less of ignorant irritation. Publicists who once assuaged themselves by laboring transatlantic follies, who reached their time in warning Americans against entanglement with perfidious Albion and Britons against enmeshment in American mare production, are now eagerly seeing the opposite shore of the ocean, waiting to cheer every step of progress in the other as possibly the first step toward recovery for both. Neither power, in short, is any longer overawed by or afraid of the other; there results an atmosphere in which friendship of the sturdy, unromantic but useful sort can grow and prosper.—New York Herald-Tribune.

Shows That Live Stock Was the Saving Factor

Industry Weathered this Year Better Than Other Products Of Farm Industry

The review of the Live Stock Market and Meat Trade for 1931, issued by the Markets Information Service of the Dominion Department of Agriculture, states:

"The commercial meat animals industry weathered the year much better than any other major branch of farm industry. Indeed, saleable live stock, and with this, of course, we must include poultry, was to the possession the saving factor in the year's performance. On the farm, at the beginning of the new year, those producers who had included live stock in their 1931 programme, found themselves in a much more advantageous position than those who had not."

New Method Successful

Illustration All Ready To Print Sent By Radio

The North German Lloyd line announced the successful transmission by wireless from Zurich, Switzerland, to the S.S. Bremen, of a picture in the form of an engraving.

The receiving apparatus on the vessel transformed the picture into a card ready for printing.

The process, known as radio-type, represents several decades of scientific research by Adalbert Guth, director of the Swiss Radio-type Company.

Judd: "I hear they are using all sorts of machines in the manufacture of illuminating gas nowadays."

Budd: "True; they even make light consumers' complaints."

More than 1,000 new companies are registered in Sweden last year.

"I was told that the 1931 year was a sorry, indeed, that I called you a rhinoceros yesterday."

Huller: "You said to forgive."

"Quite all right, old boy," he said hurriedly: "you said it in the heat of the moment, as it were."

"Yes," returned Troogood, "I read in the paper today that a rhinoceros was found 1930."

Mistress: "Why don't you light the fire?"

Maid: "Because there's no coal."

Mistress: "Why didn't you let me know before?"

Maid: "Because we were such bad boys."

Great Booster For Canada

Prince Of Wales Advises British Business Men To "Step Right Over"

Canada has a great booster in the Prince of Wales. His is the type of Canadian citizenship which might well be simulated to the advantage of the Dominion. Recently the magazine "Canada," published in London, quoted His Royal Highness as follows:

"Step right over and see Canada for yourself. Remember it takes only six days across the Atlantic and only a few more to see the Rockies and the Pacific Coast. And if your business cannot spare you, remember there are such things as business holidays."

There is a double intent in the Prince's invitation to the business men of the Old Country to "step right over" and see Canada. In it it appeals to their inclination for pleasure, but at the same time does not neglect a suggestion of business. With the suggestion of pleasure he tells them to make the one visit on the other, and yet get the advantage of both, and a man of affairs the possibility is arresting.

There is, as well, a desire to promote a greater interest in the Dominion and its trade possibilities. Quite recently the Prime Minister has made a similar proposal. He would have all the visitors to the Conference in July take a trip through Canada from coast to coast. He believed that were they to do so they would obtain a greater impression of the trade possibilities the Dominion has to offer and of the aspirations of the people. It is a suggestion which it is to be hoped that if their time permits many of them will adopt the suggestion. They may be sure of a very hearty welcome.—Herald Daily Star.

Flight Of Wild Geese

Bird Tagged By Jack Miner At Kingsville In B.C.

An idea of the vast stretches of territory covered by wild geese in their migratory flight was revealed in the finding in B.C. of the charred bones of a goose.

On the leg of the bird, which apparently had perished in a bush fire, was a tag bearing the name of Jack Miner, Ontario naturalist. The bird at one time had sought shelter in a great bird sanctuary at Kingsville, and was fed by Miner. The tag and information concerning the incident were sent to Miner by a settler in an isolated district near where the bird was found.

Birds tagged by the naturalist have been found as far east as the Atlantic coast and from the Gulf of Mexico to Mexico. This is the first time one ever has been known to cross the Rocky Mountains.

Poultry Development

Dominion Poultry Official Believes Prospects Areal Encouraging

P. C. Elford, Dominion Poultry Husbandman, and outstanding leader in poultry development in Canada, on a recent occasion observed that few people realize what a big part the hen has played in the national life of Canada. "There are many prominent business men today who would not be where they are if it had not been for the hens on the farm at home," he states. "The poultry provided the money for shoes, and slates and pencils, and were in fact responsible for keeping them for school. I myself do not know of any other business today which pays better dividends than poultry raising, and I believe the prospects are still encouraging."

Adding Insult To Injury

Troogood's face wore a worried frown as he approached Huller.

"I say, old man," he said, "I'm sorry, indeed, that I called you a rhinoceros yesterday."

Huller: "You said to forgive."

"Quite all right, old boy," he said hurriedly: "you said it in the heat of the moment, as it were."

"Yes," returned Troogood, "I read in the paper today that a rhinoceros was found 1930."

Mistress: "Why don't you light the fire?"

Maid: "Because there's no coal."

Mistress: "Why didn't you let me know before?"

Maid: "Because we were such bad boys."

Egypt plans to hold a government sweep to raise \$5,000,000 to build a new hospital in Cairo.

Dominant Optimism

Hon. Frank Carroll Is Struck With the Spirit Of The West

An impression of dominant optimism throughout western Canada has been brought back to the east, by Hon. Frank Carroll, Quebec publisher. The west, he said, was looking as "fresh and fragrant" as ever, and the people were just as optimistic of the future as they were when I passed over the same ground some eight years ago.

Mr. Carroll spoke of his efforts to pave the way for "our intra-empire trade crusade" by increasing trade with the west. He said he and a group of associates planned to sponsor an "exchange goods" week, in which eastern and western Canada would co-operate during the present year.

"There is little or no Russian Bolshevism among the Canadian-born and a large section of the foreign element remains true to it," he continued. "Some of the latter seem to be more interested in the future of Canada than most of us realize." Mr. Carroll mentioned finding Ukrainian Canadian clubs as an instance of this attitude.

The Canadian prairies, declared the Quebec publisher, were a hive of industry in comparison with the northern part of Montana and the western section of Dakota, which he had visited in the course of his journey.

New Radio Policy

Steps To Be Taken To Improve Broadcasting In Western Provinces

Under present conditions in western Canada in general and Winnipeg in particular will first feel the effect of the new radio broadcasting policy.

When the legislation now before parliament is enacted and the federal radio commission set up, the distinct understanding is that the commission will take steps immediately to improve broadcasting in the three prairie provinces, leaving the situation in the eastern provinces as it is today.

In the east there are a number of good stations, and the commission probably will not do more than lease them for purposes of national broadcast.

But in the west, the commission will exercise its authority to take over existing stations or to construct new high power stations, the objective being to provide good radio coverage in these provinces.

Absorb Insurance Rates

Steamship Companies Prepared To Deliver Goods To Churchill On Competitive Basis

Steamship companies are prepared to lay down goods at Churchill on a competitive basis with Montreal, absorbing the marine insurance rates and generally placing the west on an even basis, according to H. W. Patterson, president of the "On-to-the-Bay" Association, who made the statement as a result of correspondence with a Montreal firm of steamship agents and freight brokers.

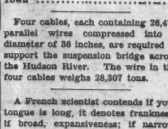

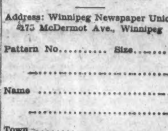

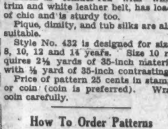

Commenting on the importance of the line to western Canada, Mr. Patterson said: "For all points west of Portage la Prairie, there is a very material saving in freight rates from Churchill as compared with those from Montreal, and provided you can start at the seaport on an equal basis."

Future Development Of Western Canada Must Be Planned On a Scientific Basis

Working On What To Resist Drought

University Of Alberta Installing Equipment For This Purpose

Resistance to drought is a new wheat breeding project which has been undertaken by O. S. Amos, University of Alberta. Over a period of years, losses due to drought are probably as great as all the plant diseases combined. It has been estimated that during each of the last two years, the crop has been reduced by drought by 75 to 100 million bushels. Owing to the failure of crops to become established there is also the enormous loss in fertility due to soil drifting and the free growth of weeds. The National Research Council has been assisting in carrying out this project which will be under the direction of the associated committee in grain research. Except for some studies made at the University of Alberta on the fundamental nature of drought resistance in plants, little has been accomplished in Canada, but Russia has been intensively studying the problem for some time.

In this work artificial climates are created by a machine. This machine has been described by Dr. T. A. Tupper, Russian, and similar equipment is being built at the University of Alberta. In this way everything including moisture, is controlled.

Business For Bay Road

Effort Is Being Made By Saskatchewan Government To Secure Shipments

An organization to solicit business for the Hudson Bay Railway, to be set up by the Federal Government, has been asked by the Saskatchewan Government.

Such an organization is needed to interest shippers to route their business over the Bay road, according to Hon. C. B. Buckle, Minister of Agriculture, in a statement issued recently.

Negotiations, Mr. Buckle revealed, are pending at present for trial shipments of cattle and other farm products over the Hudson Bay Railway. One firm of shippers has already stated its willingness to charter a cattle ship for the purpose, and cattle owned by the government may be sent by the test.

Mr. Buckle asked that interested organizations in Saskatchewan join in promotion with the Federal government.

Cheese Is a Body Builder

Supplies a Muscle Building Food In Concentrated Form

Here is a new interesting item prepared by the Milk Utilization Service of the Dominion Dairy and Cold Storage Branch. "It cheese eaten for its food value?" The low per capita consumption of cheese in Canada clearly indicates that the people do not recognize its value as a muscle-building food in concentrated form, but consider it merely as a condiment or garnish. It is interesting to note that one pound of cheese supplies almost as much protein and fat as one gallon of milk and, in addition, has a high calcium, phosphorus and vitamins content.

The muscle building foods are limited in number, and since it is necessary that the diet contain a percentage of this type of food, cheese should be more extensively used, particularly at a time when health and strength must be maintained on a lowered food budget.

"Admiral" Must Summon

The new commander-in-chief of the West-Isles squadron of the Royal Navy is Admiral the Hon. Reginald Aylmer Ramsay Plunket-Erle-Drax, G.B., D.S.O., etc. He started out with a good name and has been adding to it since by his deeds; but it is to be feared that for reference purposes the public will have to call him just "the Admiral."

Only One Drowns

Mr. Alan Cookman's flying circus, visiting the inland district of London, England, took aloft a woman aged 90 years, her daughter of 60, her grandson and great-grandson. The old lady's only regret was that her great-grandson, a mere baby, was unable to make the trip, because he lived too far away from the aerodrome.

"It was my ambition that aged me on," said the mother-beactor.

"Yes; but I understand it was the audience that aged you off."

Speaking before a service club at

Winnipeg recently, T. C. Main, division engineer of water supply for the Canadian National Railways, and consultant engineer to the Saskatchewan Commissioner on Conservation and Afforestation, warned that future development of western Canada must be planned on a scientific basis.

"Taslar things have been made to improve in haphazard manner. Settlers were allowed to homestead and cultivate land that was entirely unfit for cultivation. Sloughs and lakes were drained; timber and bush areas have been burned intentionally and accidentally, and land has been forced to grow cereal crops until practically all the fibres is gone," he stated.

Chief causes of drought were beyond the control of our present state of scientific development, but anyone who had studied the question of drought in southern Saskatchewan, southern Alberta and southwestern Manitoba, would agree that human error was to blame in a measure, he said.

Pointing to the seriousness of the water situation in the west, Mr. Main said it could be proven the southern prairie provinces and Alberta, and to a lesser extent by the amount of food that could be produced, but rather by the extent of water that could be conserved.

Conservation of water and timber he gave as the two important factors in solving our drought. Five factors he commended—close cutting and over-pasturing of prairie grass; reducing the forest area, chiefly by fire, 80 per cent of which were preventable; draining sloughs and lakes; growing too many cereals in succession; farming land unsuitable for cultivation.

Solutions for drought and soil drifting he gave as follows: planting at least one mile of suitable hedge on each quarter section; strip farming to minimize soil erosion; trees and shrubs four or five feet high; production of food that consumes less water in growing; a forest policy that will make serious fire impossible; conservation of young tree growth and reforestation so that in 50 years there will be as much timber as at present; stoppage of draining of sloughs, lakes and marshes; storing of small spring water; more judicious use of water; setting aside of light lands as forest reserves and planting with suitable trees; developing mixed farming; encouraging municipalities to construct public water supplies and the farmers who need them to construct effective ditches.

Deportation Statistics

Total Deportations From Canada During Last Fiscal Year 7,024.

Total deportations from Canada to other countries during the fiscal year 1931-32 were 7,024. The report (tabled in the House of Commons by Hon. W. A. Gordon, acting minister of immigration) was issued by J. S. Woodworth, Attorney-General.

Of this total 4,248 were deported to countries in the British Empire. Persons comprising public charges completed 4,007 of the deportees.

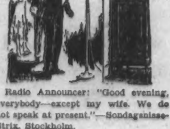

Of the other deportations, convicted or criminal offences totalled 980. Opium and Narcotic Drug Act 76, insanity, 285, epilepsies, 6, double-minded 12, otherwise mentally defective 37, medical cause 267, misrepresentation and health 280, previously deported at a time when health and strength must be maintained on a lowered food budget.

Language War In Malta

Whether English or Italian should be the ruling language is a question which has started a war of tongues in Malta. "The language of the English is a fatal social drawback in Malta, but ignorance of Italian is unforgivable because it has no occasion to display their ignorance," declared one newspaper. Champions of Italian say it is necessary to those wishing culture and refinement.

Radio Announcer: "Good evening,

everybody—except my wife. We do not speak at present."—Sondaguisen-Birch, Stockholm.

Gardening Notes

Some Thoughts Should Be Given To Best Method To Be Followed In Planting

In planning to plant vegetables, we must first determine what vegetables divide themselves into certain definite groups. Thus we have corn, cucumbers, parsnips, potatoes, beans, carrots and onions from one group; and peas, beans, radishes, turnips, rutabagas, and cabbages from another. If space is limited, we can make the best use of our garden by planting these in rows fairly far apart and in between grow early crops of lettuce, spinach, and lettuce. Or we can put the early group in one part of the garden and follow it by a second crop from short-season stuff such as lettuce

beets and celery. Generally those vegetables of which the leaves are used, such as lettuce and spinach, are the best. The leaves of the plants as the ground is ready to work, beets and carrots follow next, with cabbages and cauliflower. The last group will grow to the more tender things which cannot stand frost, such as the planting of corn, potatoes and tomatoes. To lengthen the season, we will plant the early corn and early maturing sorts, and in the case most things we should plant two or three times at two-day intervals.

It is a good idea to order or select what we have for fall to make sure that we have the list to cultivate. There should be the early, medium and late bloomers so that the soil will be so fertile that the plants will be able to grow in the shade so that there will be no clashing shadows. A heavily planted and planted in the shade, the plants are crowded, or where pluck and yellow flowers come into violent opposition.

be most critical. Select your standard varieties, that is, those which you want to grow in the greatest quantities, and add a few new ones for the sake of gaining experience and adding interest to your collection.

This is the best time, when the weather is still warm, to dig up the plants into shape. Dandelions, plants and other persistent weeds come up naturally and in removing them get out much of the root as possible. Some of the many weeding devices now on the market will save a lot of labor. At this time, too, a heavy roller used to good effect, levelling down the spots and firming soil about the roots of the grass. Loosen up the soil to a depth of 2 or 3 inches with a good lawn mixture—cheap infusors are never permanent and sometimes are dangerous. Protect this seedling with some poultry netting or brush so that sparrows will not eat the seed. Top dress with well-rotted manure or an application of good commercial fertilizer. High in

trogen, is advisable. If manure is used, be careful that it is well-rotted and free from weed seeds. The law should be cut every four or five days after growth gets well started, with sharp lawn mower. A dull machine will pull out much of the grass. Later on, when the weather turns hot, frequent cutting is advisable.

Some of De Valera's followers tentatively marched out from a social function at the French Legation in Dublin when, on arrival of the Governor-General, the orchestra played "God Save the King." The world's look on this action merely as an exhibition of bad manners—by means an Irish characteristic,

"So you want to be my son
law?"

"I-I don't-but I want to see
your daughter."-Sendagense-it

Canadian Banking System

U.S. Senator Pralises System Here in Comparison With That Of United States

The happy position of Canada's banking system as compared with that of the United States was dramatically placed before the United States senate by Carter Glass, of Virginia, former secretary of the treasury.

Glass was presenting his revision of the banking laws to permit branch banking in the United States.

Canada, he said, had not one single bank failure during the frightful depression while in the United States 5,600 banks had gone under with losses during the past two years to depositors of \$5,000,000,000.

For years treasury and currency experts have been attempting to get congress to permit branch banking. Their efforts have been so far successfully opposed by representatives of smaller communities and farming areas who believe in individual and personal banking.

Plan Trade Drive

Ontario To Place Sales Representatives In Winnipeg, Montreal and Maritime Provinces

As part of an intensive drive to secure a greater share of the Canadian market, the Ontario Department of Agriculture is placing sales representatives in Winnipeg, Montreal and Maritime Provinces. It was announced by Hon. T. L. Kennedy, Minister of Agriculture.

The duties of these representatives, who will work through the agricultural commission, will be to keep the department informed as to conditions in the various provinces, the volume of sales of Ontario agricultural products and the best means of increasing those sales.

Col. Kennedy declared that the government was launching a drive for more markets and that it will now much of the effort had been directed toward securing a better foothold in the British market. There was a big sale for Ontario products in the other provinces of Canada, the minister believed.

As to the British market, the Ontario Government already had a representative in London and at the present time W. B. Somerset, chairman of the agricultural board, was in the Old Combe in the interests of Ontario trade.

Anti-Aircraft Gun

French Have Invented Gun That Will Hit Target Seven and One-Half Miles High

That a new anti-aircraft gun can shoot down an attacking bomber at seven and one-half miles up in the air is the claim of those conducting tests on the Riviera coast, near La Seyne, France. The secret of the gun's construction is jealously guarded by the firm whose engineers planned it.

Anti-aircraft guns have previously proved effective at a height of about three and one-half miles, but modern aircraft can attain much greater altitudes. In the experiments of La Seyne an aeroplane, with pilot and mechanic, ascended seven and one-half miles, suspended 1,000 feet beneath it, a target on which the anti-aircraft gun opened fire with live ammunition.

Men of Europe are watching the tests.

Scotland's Exhibition Ship

Enterprise Is Shown By Prominent Business Men From Glasgow

Scotland has again displayed her traditional enterprise by sending the Glasgow to Canada the largest and most varied aggregation of Scottish products ever made in the Anchor-Dominion liner "Lettie."

The steamer was used as an exhibition ship for over a hundred different products of Scotland, ranging from bagpipes to boilers. About eighty of Scotland's most prominent business men accompanied their exhibit and the Trade Mission was headed by His Grace The Duke of Montrose.

The object of the exhibition was to foster closer trade relations between Canada and Scotland. The Corporation of Glasgow, which has fitted up the steamer, has a long and varied history to look back on.

Glasgow is the nearest British port to Canada, and the connection of the Clyde with Canada is of old date. John Galt, the novelist—a Scotchman, and a contemporary of Sir Walter Scott—was one of the makers of Ontario, and the city of Galt is named after him. In 1819, Captain Alexander Allan, founder of the Allan Line, sailed from Glasgow to Montreal—now merged into the C.P.R.—made his first voyage from the Clyde to Quebec. In Glasgow, in 1855, was founded the Dominion Line, now linked with the company to which the "Lettie" belongs.

The official history of Empire Trade begins with 1783. In that year was founded the first Chamber of Commerce in the British Empire, the Glasgow Chamber of Commerce, which is closely identified with the "Lettie" tradition.

The founder of the Chamber was a pupil of Adam Smith, in Glasgow. He was James Buchanan, M.P., who afterwards won European fame as an economic publicist, and who had a monument in St. Margaret's, Westminster.

Glasgow as a Cathedral city dates from the time of her patron saint, St. Mungo, the 6th century. Her greatness in industry is close on 500 years old. Not long after the Reformation, Glasgow's population was nearly 25,000. It was reduced to under 11,000 by the Covenanter War, and by the earlier disaster at the end of the 17th century.

Scotland's object in the Dairies Expedition, the story of which has been told by a Glasgow leader, J. G. P. Inish, was to establish a great trading empire in Central America. Spain was hostile and the British Government was unfavourable.

Scotland lost hundreds of lives, and most of her spare capital. One of the fleets sailed from the Clyde, and Glasgow merchants lost heavily. The failure of the Dairies Expedition, however, had much to do with the opening of trade between Scotland and the English Colonies and soon after the Union with Virginia and other American Colonies, by 1760, they had secured a very large share of the Canadian tobacco trade, and the population of the city had risen to 43,000.

These Glasgow Vikings, who were the "barbarians" who had a distinctive and magnificent costume, including a kilt and sporran. They owned many estates and had large estates on the Clyde and on the Potomac. One family, still represented near Glasgow, were neighbours of George Washington on the banks of the River James, and called their Scottish estate Mount Vernon. As American War of Independence raged, the tobacco lords and well-nigh

British Boys Working At Coast Are Making Good

Thirty-two of the fifty boys brought out from Britain in 1930 and placed on farms and in homes in British Columbia are making good in their new homes, according to information received at the Parliament Buildings, Victoria. Eight returned home, seven have disappeared and one has been brought with her officers.

The scheme has been in force for some years in other parts of Canada and is under the auspices of the Imperial Dominion and provincial governments or some responsible organization. The boys brought to British Columbia were taken in charge by H. W. G. Holden, colonization commissioner of Vancouver, who has made periodical inspections of their homes.

They are the sons of British subjects and are properly cared for and recording progress made by them. No boys were brought out in 1933 and none will arrive this year.

A complete fishery exhibition will be part of this year's agricultural show at Grimby, England.

More than 200,000 goats and sheep are being raised on the Aegean Islands.

COLIC

"Really, this BABY'S OWN TABLETS are wonderful," writes Mrs. F. Macdonald, Northfield, Ont. "My baby has no more colic pain."

"Don't let your baby suffer—give BABY'S OWN TABLETS. For colic, fever, upset stomach, constipation, flatulence. Absolutely reliable. 25c per box."

Dr. Williams' BABY'S OWN TABLETS

ruined Glasgow. It was then, amid disaster, that Glasgow set herself to design the Clyde for ocean trade, develop the industries that had been subsidiary to shipping ventures, work the coal and iron of Clydeside on a big scale, and extend her trade over the world.

These energies were co-ordinated by the establishment of the Chamber of Commerce, which set up a Glasgow House in London and at Oxford, and began at once to exercise a powerful influence in Scottish and British trade. Glasgow never looked back since 1788. With the launching of the "Comet" in 1812, she began her great career as a ship-building and engineering centre.

Today, Glasgow has a population of well over a million. Her technical versatility is endless. Some 3,000 different kinds of machinery are manufactured by her Chamber of Commerce and the commercial and industrial life of the British Empire is largely dependent on the Glasgow and District Development Board, the largest of the regional boards affiliated with the Scottish National Development Council; and the Board is doing good work in encouraging the establishment of new industries throughout an important industrial area with a population of well over one and a half million.

Modern Robinson Crusoes

Might Be Found If Lonely Islands Could Be Searched

Recently a man returned to his native land after he had long been up-for-dead. Years ago he sailed from his native land to the Pacific, and during a stormy voyage his ship took fire and was abandoned.

Likes the plots of many stories, this man with one or two shipmates, managed to land on an uninhabited island, and there existed in a manner true to every Robinson Crusoe style story.

There is a possibility that scores of travellers and sailors are living on small islands, praying for the day when some small ship, driven well off its course, will pass close enough for their crew to see the smoke signal. Quite a few family survivors might be saved if all the lonely islands could be searched and their strange inhabitants brought back to civilization.

Evidence constantly crops up at various times to prove that it is not an uncommon fate. In such places as the Hawaiian Islands, there are thousands of specks of land which are rarely visited. Any of these might be inhabited by one or two people, waiting, year after year, for a rescue ship to appear on the horizon.

Apart from the small islands, there are thousands of places in the world where men could scramble ashore and, although on a mainland, be just as isolated as if on an island in the middle of the Indian Ocean.

There are many sections of coast where nothing but a bird or a few sheep—except by sea. A narrow stretch of sand between two mountains and backed by a cliff of tremendous height, means isolation more hopeless than that of a mid-ocean island. There are many such spots on the west coast of Vancouver Island, B.C.

A man who had been one of several wrecked near Cape Horn, might just as well have been marooned on the loneliest island in the world, for it was impossible to struggle to civilization from their bleak shelter. Weeks and weeks passed before a first accident enabled him and his shipmates to be rescued.

Weekly Newspaper Convention

Dominion Gathering To Be Held This Year At Port Arthur

More than 275 editors and publishers of weekly newspapers throughout the Dominion will attend this year's convention of the Weekly Newspapers' Association, to be held at the Head of the Lakes, July 28 and 29. It is announced. Plans already are under way for the reception and entertainment of the convention delegates, whose sessions will be conducted at Port Arthur. S. J. Dorman, of the Despatch, Alameda, Sask., is president of the association, and E. Roy Sells, of the Mercury, Trenton, Ont., is secretary and manager.

Might Be Good Idea

"The Brantford Express" is right in referring to them out near Vancouver. "Donkubankers." Instead of deporting these miscreants who send their ships up to live with the Eskimos and let them practise their denuding stunts. Either mosquitoes or the Arctic cold would make it just too bad.

July 25 varieties of spring wheat are grown in Western Canada.

Diet Announced As Cure

Celiac, a Childhood Disease, Requires Only Good Food

A cure for celiac disease without a drug of medicine was reported to the Medical Medical Association at New Orleans. Diet alone does it.

This disease is one of the pitiful list of childhood, causing retarded growth, serious stomach disorders, growing weakness and, when too long neglected, almost certain death.

Food treatment is a new treatment for the rapidly-developing case of feeding in two or three commonplace articles of food and regulation enables the body to natural "medicines."

On cases of celiac disease is a peculiar form of sugar starvation. No matter how much sugar a child eats the system cannot assimilate it, and the sweet only makes them worse.

Dr. Haas found the sugar in ripe bananas can be eaten freely and that in the sweet only makes them worse. Dr. Haas found the sugar in ripe bananas can be eaten freely and that in the sweet only makes them worse.

Has Plenty Of Variety

Missionary Sent From West Indies To North Of Scotland

Life is just one extreme after another for the Rev. Frank Jarvis, Church of England missionary, one of the 122 passengers arriving at New York on the Mauney Line "Mun-ger."

After four years of basking on Cat Island, in the West Indies, he goes to Thurso, in the extreme north of Scotland, where it is cold and misty the year round.

"But," he said laughing, "I'm glad of the change, because life does require some variety." He tried without much success to interest some of the negroes in Latin and Greek.

C.N.E. Radio Broadcasting

Radio broadcasting cost the Canadian National Railways \$41,000, 1929, the House Committee on railways and shipping was advised, but only \$114,000 in 1932, in 1933.

The House figures for 1930 were \$400,000, and for 1931, \$326,245. There was a certain amount of revenue from the use of facilities and the Canadian National Telegraph, in addition to the advertising benefits which could not be reckoned in dollars and cents.

Upsets Old Theory

But Explanation Given By Scientists Is More Wonderful

Someone is always taking the poetry out of life. One of the most picturesque fancies about the lovely islands of Bermuda is that they are built up of coral, itself the beautiful architecture of the polyps. Countless billions of these humble little creatures, working through the centuries, have made it possible for humans to inhabit these "green isles in the sea." It was thought—and there is something peculiarly fascinating in the idea, that it was the inevitable scientist with the prosaic explanation that the islands, though encrusted with coral, are in reality the peaks of extinct volcanoes, which at some remote time were covered by the sea, during a great upheaval in the ice age. "A recent deep boring, made in the hope of finding water," are we told, "failed completely in its purpose, but provided absolute proof of ancient volcanic activity. The first three hundred and sixty feet showed limestone such as we find everywhere today in the West Indies, down to the ex-fresh yellowish clay-like rocks represented decomposed volcanic tuffs. From here down to the extreme limit of boring, four hundred feet, there was nothing but volcanic rock, and this undoubtedly extended to the very ocean floor." Well, 300 feet of limestone is evidence of considerable activity among the polyps, even if the limestone does rest on volcanic rock. But the scientist will not have it that the land grew up out of the water as the result of such activity. It was not the lava of the coral polyps, but the subsidence of the ocean that established the dry land. "Many years ago," is the Pleistocene age, great windstorms carried away vast quantities of water, drawn up into clouds from the ocean, and deposited it as snow over all the northern lands of the world. "Little by little as more water piled up on the level of the land, the level of the Atlantic ocean sank, and Bermuda mountain came nearer and nearer to the surface. Finally when over half a mile thickness of ice and snow had piled up, the sea was lowered over two hundred and fifty feet, leaving Bermuda high and dry." After all this explanation is even more wonderful than the old-fashioned coral theory.

Hope To Beat Record

Veteran Aviators Out To Lower Fast Gassy Time

Two veteran aviators, Jimmie Mattern of Fort Worth, Texas, and Bennett Griffin of Oklahoma City, plan to take off in June, in an attempt to lower the globe-circling record of eight days and eight hours, set by Wiley Post and Harold Gatty.

The two expect to hop off either from Chicago or New York City for Harbor Grace, thence across the Atlantic Ocean to Ireland, over England, Holland or Belgium, Germany, Poland, Soviet Russia, Alaska and Canada.

German scientists have made studies showing how different metals are affected by cleaning solutions and disinfectants.

All herring fishermen in Scotland have organized.

Dr. Lyle E. Finkham's Vegetable Compound

She's all worn out again

Poor girl, it's her the same old story. The medicine she had to take she ought to try Lyle E. Finkham's Vegetable Compound in tablet form.

Governmental Expenditures

"Some Canadians have yet to learn that governments, like all other organizations, must pay their way and the public is not always a gold mine for finance ministers." Col. W. L. McGregor, president of Canadian Chamber of Commerce, said, addressing the Vancouver Board of Trade, W. M. Birks, past-president of the Canadian Chamber, also addressed the board. Stating that governmental demands for money today is placing a severe strain on industry of Canada and that business finds it increasingly difficult to get new capital because of governments' needs, Col. McGregor said: "Business at any rate is balancing its budgets these days but yet more public ownership and expenditures is advocated. It would seem more to the point to suggest more business in governments than governments in business. Boards of trade and chambers of commerce should set an example, by refraining from asking spending bodies to make expenditures which can well be avoided. Let us have a breathing spell."

"I am most sympathetic toward our governing bodies. They must have, in these times particularly, the support and co-operation of the public and business. To put it bluntly, however, they are spending our money and we haven't got it to give. I would like to suggest therefore that public bodies should have the courage to say 'no' these days more often than usual and conserve money on the more important projects."

Canada holds premier place in an empire which has survived because of its vitality, said Mr. Birks. Gone are the German, Russian, Ottoman and Austrian-Hungarian empires. The British Empire, he said, is not the empire of 1914. It is something new, how new neither its own citizens nor the outside world will yet realize.

Quoting Goldwin Smith's "Canada is an attempt to defy geography," Mr. Birks said that Canada today is in the centre of the map.

Canada was the "fourteenth colony" in America, continued Mr. Birks, the only colony which remained loyal, today the first dominion. If the "fourteenth" had been peopled by Frenchmen, the only colony which remained loyal, today the first dominion. If the "fourteenth" had been peopled by Frenchmen, the only colony which remained loyal, today the first dominion. If the "fourteenth" had been peopled by Frenchmen, the only colony which remained loyal, today the first dominion.

Explosive Tolls Of Hardships

Rebuke To Civilization After Facing Death In Paraguayan Jungle

A story of excruciating suffering in the Paraguayan jungle, including being almost eaten alive by a snake, nearly an inch long, was told by Donald S. Wees, explorer, who has just returned to civilization. "Wees, who spent three months in scientific work in the north-eastern Paraguayan, in the 'Paraguayan Desert,' is on his way back to the United States by way of Buenos Aires."

Besides the encounter with the snake, he told of battling snakes in the Acary River with a makeshift canoe. He also told of a struggle with a jaguar, which he killed with a knife.

Early in March, he said, a month after the expedition left the headwaters of the Yguazu River for the Brazilian border, his companions collapsed and faced starvation. In spite of the fact that his feet were rotting from the humidity, he walked 30 miles until he found some Indians with whom he was able to barter cloth, fish, fashions and soap for some beans, corn and manioc root to feed his party.

Prison In Vatican City

Small Jail To House Local Prisoners

A Vatican jail is the latest development in the transformation of this papal city. Plans are being discussed for a small prison beside the ancient mint which has been remodelled as a power house.

Since the Lateran Treaty of 1929, Vatican City has had the right to try and incarcerate persons guilty of crimes committed within its territory.

Free Time Tables

Should Canadian railways make a charge to the public for time-tables? This point was raised in the Commons Railway Committee. In Great Britain, a small charge is made, but Sir Henry Thornton, doubted if it would be possible to do so in Canada. "I don't let anyone tell your governing body of health and vigor," said Sir Henry. "They banish the condition by creating new blood which imparts health, vigor and vitality. Equally good for all run-down or nervous constitutions. At your druggist's. See a package."

You said it! it pays to "ROLL YOUR OWN" with..

Thousands of delighted smokers say it because they have proved it, time and time again. You can roll at least 50 cigarettes with a 20c. package of Turret Fine Cut cigarette tobacco. And every cigarette you roll will be to your liking. The more you roll, the more you'll enjoy them.

Victorian Order Of Nurses

Increased Interest In Being Shown In The Work Carried On

Despite lowered financial resources, increased interest is being shown in the work of the Victorian Order of Nurses, and 1931 was an outstanding year, Miss Elizabeth Smellie, chief superintendent, told the 34th annual meeting of the board of governors at Ottawa.

The superintendent's optimistic report was echoed by other speakers including Senator George P. Graham, the president, who declared there was never a time when the people were so good according to their ability in the cause of human welfare.

"We are facing this time with our backs to the wall but we are full of courage and hope, feeling sure that the work we are carrying on is essential to the nation, the president said."

Baltimore Repeals Old Laws

Made When State Was Founded Two Hundred Years Ago

Baltimore, by the largest vote ever given a question or a candidate, has repealed its 200-year-old Sunday observance laws, which even prohibited a man's kissing his wife on the Sabbath.

Growing Girls!

Profit by the Experience of Others at This Vital Time

"When I was 14 I was so ill my people thought I was going to die," writes Marie Ann Wilson, Sussex Ave., Toronto. "I had scarcely any blood, and was so weak I could hardly walk. I had no appetite and I lost ground every day for the first two weeks. I had lost the first two weeks of my life."

"I had scarcely any blood, and was so weak I could hardly walk. I had no appetite and I lost ground every day for the first two weeks. I had lost the first two weeks of my life."

Little Helps For This Week

"Therefore for Thy name's sake lead me and guide me."—Psalm xxxi. 3.

My Father, God, lead on! Directly I follow where Thy guiding hand leads my steps; I would not tremble long before the way.

Is dark as night; I stay My Father, I trust Thy love, lead on!

All virtue consists in having a willing heart; God will lead you as he will, if only you do not doubt, and are filled with love for Him rather than fear for yourself.—Pascal.

Vienna, Austria, has built 38,330 residences in its apartment houses, and 4,000 residences for one or more families since 1928.

Rebecca (to husband during night)—Lest, get up, there is someone snoring under 'de bed, I think it's a burglar in the house.

Lest—Don't make any noise and even he wakes up! I'll charge him for lodgings.

The house had been rapidly built and occupied.

"Do you find the place comfortable and substantially built?" asked the landlord when he called.

"Yes, my dear friend, I always go outside to see."

Lyons, France, has twelve miles of docks.

THE RHYMING OPTIMIST

By ALICE MacKINLAY

REQUEST

Because you love me well you offer me

Such gifts as love has brought through ages long

To the beloved—a bit of laurel.

A moon-white rosebud and a tender song.

Because you love me, sometimes you say:

"Be true to my own, what most your heart desires:

A goodly lot with birds and roses gay!"

A glowing ruby lit with ruddy fire!

Because I love you well (how well God knows!)

I name the boon which I would have you bring:

A gift more lovely than the moon-white rose.

More precious than the jewels of a king's crown.

Though years will steal our beauty, fade your youth,

Give me always the priceless gift of truth!

Miller's Worm Powders are the medicine for children who are found suffering from the ravages of worms. They immediately alter the stomachic conditions under which the worms subsist and drive them from the system, and at the same time, they are potent in their effect upon the digestive organs, restoring them to healthful operation and ensuring immunity from further disorders from such a cause.

To Recognize Air Scouts

Special Camp At World Jamboree In Hungary Planned

For Air Scouts in the history of the Boy Scout movement, Air Scouts will be officially recognized at the world Scout Jamboree in Hungary next year. The Hungarian are completing arrangements to hold a special camp for Scouts from all nations who are actively engaged in studying flying. The "Flying" camp will be in charge of M. Stephen Horvath, eldest son of the regent of Hungary.

At Horvath, an expert pilot and gliding instructor.

Rebecca (to husband during night)—Lest, get up, there is someone snoring under 'de bed, I think it's a burglar in the house.

Lest—Don't make any noise and even he wakes up! I'll charge him for lodgings.

Green Leaf Holds Secret

Method Of Storing Sunlight Still Fought To Scientists

Science has not yet solved the green leaf's secret of storing up the energy of sunlight by converting carbon dioxide into carbohydrates. It appears from research by Prof. G. MacKinnon of the University of California's division of plant nutrition.

Vegetation has the ability of turning carbon dioxide, the gas exhaled by organisms and given off by fire, into carbohydrates, useful as starches, sugars and cellulose. Some six years ago Prof. B. C. G. Daly, professor of chemistry, university of Liverpool, reported the reduction of carbon dioxide to formaldehyde and carbohydrates in vitro, that is in the test tube.

Others worked on the same important problem with varying success. Prof. MacKinnon has attempted to repeat the experiments but has been forced to conclude in his report to the American Chemical Society that "no procedure has yet been published whereby conditions for obtaining formaldehyde and carbohydrates in vitro can be duplicated in other laboratories."

Since photosynthesis, as the process is called, is fundamental to the existence of life on earth through the utilization of sun energy, scientists will continue to search for its mechanism.

Interesting Local Items

Don't forget the Red Cross
drive next Saturday and Mon-
day in town.

Mrs. T. Todd was taken to the
hospital last week to under-
go an operation. She is now im-
proving daily.

Mr. S. Bailey is at present in
the hospital undergoing treat-
ment for internal trouble. Lat-
est reports are that she is doing
well.

Would the party who put
sand in my tractor two years
ago and syrup in it this year,
kindly call at my place so that I
might see what the "missing
link" looks like. E. J. Gunder-
son.

Last Sunday evening Redcliff's
second softball squad was seen
in action in the Hat when they
defeated Slemco's All Stars in
the time of 19 to 8. Owing to
the poor condition of the field,
god playing was impossible but
nevertheless the home boys
were the better throughout the
game. A return game will be
played here in the near future.
